

Koolsola

It saves more than the planet

Now there's a proven product that will cool and heat residential, commercial and industrial buildings using significantly less electricity!

The Koolsola Thermal Air Conditioning system uses the sun as a heat source to assist the energy needed to drive the cooling process of a typical air conditioning system. This significantly reduces the electricity consumption required to run the compressor so you'll make big savings on electricity costs.

- * Koolsola Thermal Air Conditioning helps reduce electricity consumption by up to 70% when compared to conventional units
- * Cools and Heats
- * Works day & night and in rainy or cloudy weather. Requires only 4 to 5 hours of sunlight to operate for 15+ hours, so continues saving into the night
- * Designed service life of 30 years, 5 year parts and labour warranty
- * Saves you the majority of your air conditioning electricity charges, up to 70%
- * You can have it running 24/7 without worrying about the bill
- * Australian Standards, MEPS, CE, TUV and ISO9001 certification
- * 10dBA quieter than conventional air conditioners
- * Enables economical heating on cold days
- * Helps save our planet and reduces greenhouse gas emissions
